

Re-Threading Universal Complete Buckle Lower Strap

Step One – Thread rectangle clip down through the crotch strap. Threading the strap over and under the centre bar of the clip so it looks like this when holding the strap with the strap vertical.

Step Two – Push the top of the strap through the gap at the back of the centre buckle. And pull through the gap on the underside of the buckle.

Step 3 – Thread the top of the strap back through the rectangle clip – threading over and under again to secure.

It should look like this when completed!
